DETAILED ACTION

Claims 1, 2, 4-11 are pending in the application.

This Office Action is in response to the Amendment filed on 3/31/04.

Response to Amendment

The rejection of claim 2 under 35 U.S.C. 112 1st paragraph has been withdrawn in light of Applicant's amendment of the claims.

The rejection of claims 4-11 under U.S.C. 112 1st paragraph is maintained for reasons set forth of the record mailed on 12/18/03 and further discussed below.

Response to Arguments

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 4-11 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In response to this rejection, Applicants argue that the amended claim 4 recites "stringent hybridization conditions" under which the nucleic acid would hybridize to the DNA of SEQ ID NO:1. Applicants also argue that the specification discloses a "functionally equivalent" of Mda-5 at page 33, which is "a protein retains substantially

Art Unit: 1636

the same biological functions which are characteristic of Mda-5. Applicants therefore conclude that the written description requirement is met.

This argument is fully considered but deemed unpersuasive. Claim 4 encompasses a large genus of nucleic acids of different size which share certain sequence homology with SEQ ID NO:1. Although the specification defines a functional equivalent of Mda-5 as a protein retains substantially the same biological functions as Mda-5, the specification fails to disclose the structural requirements (for example, functional domain) of such functional equivalents for its biological activity. In addition, the specification also fails to describe what common structure such functional equivalents must share for their growth suppressive activity. As such, the structural functional relationship of the claimed nucleic acid is missing. Mere definition of a functional equivalent without describe the structural functional relationship is not sufficient for written description requirement under the statute. Therefore, the rejection is maintained.

Conclusion

Claims 1 and 2 are allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
